

August 14, 2018

Ms. Deborah McDonnell
Village Manager
Village of Ossining
16 Croton Avenue
Ossining, NY 10562

Dear Ms. McDonnell,

The Collective for Community, Culture and Environment is pleased to submit to the Village of Ossining its Report on the Housing Vacancy Rate Analysis for residential properties in the Village with six or more units that were built before January 1, 1974. The CCCE Housing Vacancy Study conducted at the end of June and early July 2018 found a vacancy rate of 3.06% for these properties.

The attached report contains a review of the process and the methodology used to conduct the study, and our findings, including tables and maps describing these findings in detail.

Please let us know if you have any questions on this material. As per our discussion, we are planning to make a presentation of this work to the Village Board of Trustees at its work session on August 29, 2018.

Thank you for the opportunity to work with the Village on this important topic.

Sincerely,

Yvette Shiffman
For CCCE

VILLAGE OF OSSINING - HOUSING VACANCY RATE ANALYSIS

Introduction

The Collective for Community, Culture and Environment (CCCE) responded to a March 2018 RFP by the Village of Ossining for a consultant to conduct an Analysis of the Housing Vacancy Rate in the Village. Our proposal, submitted in April 2018, was selected and a consultant agreement was executed by CCCE and the Village on May 16, 2018.

The project sought to determine the vacancy rate in buildings that were completed prior to January 1, 1974 and contain at least six (6) dwelling units. The vacancy rate analysis can be used by the Village Board of Trustees to determine whether a housing emergency as defined by the NYS Emergency Tenant Protection Act (ETPA) exists for this class of buildings. The study commenced in late May and was completed at the end of July 2018. CCCE members with the assistance of graduate students from Pratt Institute's planning department conducted the study.

Methodology and Process

The study of the vacancies in the subject buildings was based on information obtained primarily from the owners, managers or superintendents of the buildings. Owners were contacted by certified mail and asked to return a short survey on vacancies in their buildings. Owners were also called on the telephone to obtain vacancy information, and onsite observations were made of each building in order to verify the information obtained by mail and phone, and to try to obtain information in the case of buildings where we had no mail or phone responses.

This study used the US Census Bureau's definition for housing vacancy rate. Vacant units are units that are available for rent or sale, and not vacant due to construction such as repairs and renovation or being used for storage. Housing Vacancy Rate is calculated by dividing the number of available vacant units by the total number of units. Total number of units is equal to the sum of available vacant and occupied units.

As noted above, the universe for this study was the total number of residential units in buildings that were completed prior to January 1, 1974 and contain at least six (6) dwelling units. After an initial meeting with the Village Manager, Deborah McDonnell, and the Corporation Counsel, Stuart Kahan, a digital list of addresses of buildings that fit these specifications was obtained from the Tax Assessor's Office and mapped by SAVI, our sub-

consultant. There were a total of 71 parcels¹ with 1821 units on the list obtained from the Tax Assessor's office. Since the list did not contain phone numbers for the owners, we had to research them. Mr. Kahan provided some of the phone numbers and new addresses for some property owners/managers. Other phone numbers were obtained through the internet and a few from the Section 8 office. In addition, an informal interview was conducted with Marilyn Geraldo from the Village's Section 8 Office, to obtain background information, and a few conversations were held with local property owners/managers. The 2017 housing study by Ken Dworka, consultant to the Village, also provided useful background for the vacancy study.

To facilitate the surveys, in mid-June Mr. Kahan sent a letter to property owners/managers to introduce the study and CCCE. Given the short time period to complete the study, phone calls were begun as soon as numbers were available. In order to ensure reaching as many owners as possible, certified letters were mailed to the owners/managers using the address list obtained from the Assessor as soon as the letter from the Village was sent. The mailing of certified letters requesting a timely response was done on June 19th and 23rd. The letters indicated that no response would mean that the building would be counted as having no vacancies. During the phone surveys, each property owner/manager was called – some at least 3 times, if no response was received – and a call back number was left. On July 9th, the final message indicated that no response would be considered as indicating no vacancy.

On June 20th, the first on-site observation was conducted, followed by two others on June 27th and July 3rd. As noted above, each address was visited and on-site observations were made. We examined the number of mailboxes and doorbells, as well as whether there were satellite dishes or air conditioners running. During the site visits, the CCCE member accompanied by graduate students also talked to the building superintendent, if available, neighbors, tenants or shop owners in the vicinity of the properties in question to obtain information on vacancies. Three trips covered all the properties on the list. This information was used to confirm the information obtained through mail and/or phone surveys. In cases where the certified mail was not picked up or did not reach the property owner and no phone number was available, these on-site observations, when possible, were used to determine the vacancy status of the property. The cooperatives that were on the tax assessor's list were exempted from the analysis based on the exclusion of cooperative and condos from the Emergency Tenant Protection Act of 1974, unless upon cooperative conversion, tenants did not purchase their apartments. Our initial phone surveys indicated that there were no rental units in these properties, and thus they were not included in the analysis.

Further, there were a number of cases when the owner's information indicated that their

¹ We consolidated four of these parcels since all of them were part of the same cooperative with a total of 187 units.

property had less than the number of units on the tax assessor's list: 4 or 5 units rather than 6 units. We corroborated the unit count information with the Village Building Department and thus based the calculations on the tax assessors' unit count data, noting on Table 1: *Vacancy Rate Analysis Results* that the owner provided other information. These situations should be further reviewed to ensure that information is up-to-date and accurate.

When our on-site observations indicated that construction might be going on at a property, we reached out again to the property owners to determine whether this was the case and whether the units identified by them as vacant, were, in fact, not available at this time due to the work being undertaken. The follow-up calls in most cases confirmed that the units reported as vacant by the property owner/manager were vacant because of repair work and that they would be back on the market in a month or so. In such cases, vacancy rate calculations were made by reducing the total number of units as well as vacant units in that property by the number of units under construction since those units were not available for rent at the time of the survey.

Findings

The final survey included 64 parcels with 1503 units. Table 1: *Vacancy Rate Analysis Results* presents an overview of the results of CCCE's mail and phone surveys conducted with owners of subject properties, on-site observations regarding vacancies in these properties, as well as any discrepancies between owner responses, Village data, and onsite observations and how we resolved these discrepancies. The **overall vacancy rate** for buildings that were completed prior to January 1, 1974 and contain at least six (6) dwelling units in the Village of Ossining is **3.06%**. Table 1 provides the building address, the owner's name, total number of units, and the number of vacant units, as well as the vacancy rate for each property. It also includes the overall vacancy rate for subject buildings. In addition, Map 1 - *Vacancy Study Results*, shows the spatial distribution of said properties, color-coded to indicate the buildings that have been determined to have a less than 5% vacancy rate or a greater than 5% vacancy rate. (The numbers on the map correlate with the parcel numbers in column 1 of Table 1).

Seven parcels on the original building list provided by the Tax Assessor, which have subsequently not been included in the analysis, are also indicated on Table 1 and Map 1. Five of these parcels are cooperative properties without any rental units. Two parcels were excluded because we were unable to obtain vacancy information due lack of correct address and phone information and inconclusive site observations. These exemptions and exclusions have an infinitesimal impact on the vacancy rate.

Also included in this report is an analysis of the vacancies according to building sizes. As shown in Table 2: *Vacancy Status of Parcels Grouped by Number of Units*, there were 40

parcels with 292 units in buildings with 6 to 10 units, 12 parcels with 161 units in buildings with 11 to 17 units, and 19 parcels with 1368 units in properties with 18 or more units. The vacancy rates for parcels included in the analysis are 3.26% in the buildings with less than 10 units, 3.8% in buildings with 11 to 17 units and 2.90% in buildings with 18 or more units, as summarized below.

No of Units in Parcels	# of Included PARCELS	# of Included UNITS	VACANCY RATE
6 - 10 Unit Parcels	38	276	3.26%
11 - 17 Unit Parcels	12	158	3.80%
18+ Unit Parcels	14	1069	2.90%
TOTAL	64	1503	3.06%

Table 3: *Vacancy Rate Analysis by Parcels and Units* provides an analysis of vacancy rates for parcels and units included in the study, as well as a breakdown of parcels and units that are under renovation, excluded or exempt grouped by number of units. A total of 50 parcels (78.13% of the parcels included in the study) and 1094 units (72.79% of the units included in the study) had a vacancy rate of less than 5%. Within this subgroup, 43 parcels with 650 units had a 0% vacancy rate. Map 2 – *Median Household Income* provides an overview of these parcels with less than 5% vacancy rate correlated with median household income of the census tracts in which they are located. The map shows that the majority of these parcels are in areas where the median income is between \$30,000 and \$65,000.

In addition to the detailed summaries of our findings appended to the report and described above, we thought it important to include some anecdotal information regarding housing vacancies in the Village from our conversations with people mentioned above as well as those we spoke with on the phone or during the site visits.

At our meeting with Marilyn Geraldo, who runs the Village’s Section 8 program, we learned that there are very few vacancies in buildings where the program has historically placed Section 8 recipients. In a typical month, where 60 applicants may be given a voucher, usually only a few of them will be able to find housing within the village of Ossining. People often wound up in apartments in other parts of Westchester or in southern Connecticut. In a conversation with a local owner of several properties, he indicated that the 6, 8 or 10 unit buildings in the area were more likely to be fully occupied than the larger buildings. This

information is corroborated by our study, which finds that 84% of the 6-10 unit parcels have a 0% vacancy rate. (Table 3).

During the on-site survey, a mailman said that vacancies were rare in the Village. In some properties, tenants said people stayed a long time in their apartments. Tenants in other properties thought turnover was high, but that through word of mouth the vacancies were filled quickly. During the phone survey, a few small property owners said that demand was very high and they hadn't had many vacancies; when they did, it took a short time to fill them.

Conclusion

In conclusion, the CCCE Housing Vacancy Analysis conducted at the end of June and early July, 2018 found a vacancy rate of 3.06% for the properties built before 1974 and containing at least 6 units as described above. Pursuant to the NYS Emergency Tenant Protection Act, because the vacancy rate for these properties is less than 5%, they are eligible for the Village to consider declaring a housing emergency.

Total Vacancy rate

NOTE:

1. In Table above, "Delivered*" means that this owner received one letter for multiple properties that s/he own/manage. "Other" means that postal tracking code says "Awaiting Delivery Scan"
2. In Table above, AQUA highlight indicates properties that were excluded for lack of information, GRAY indicates properties that were exempt due to not being a rental property, and GREEN indicates that we were able to reach the property owner/manager either by mail or phone.
3. When the Tax Assessor's reported total number of units per building conflicts with the owner's reported total number of units, the Tax Assessor's number of units are used for our calculations.
4. When a property has vacant rental units that are being repaired/remodeled/renovated so that they are not available in the market, those units are deducted from the property's total number of
5. If the certified letter was delivered to the property owner's address or notice was left but letter was not picked up from Post Office, the property is assumed to NOT have any vacancy. The letter clearly says that non-response would be taken to mean that there is no vacancy.
